

LERIVAL

PolyHex

Incorporated Architecture & Design

PolyHex

Poly Hex explores the endless modularity of Lerival's original Stainless Steel Hex Table series in everyday rotational-molded polyethylene, allowing for color, texture and the occasionally unexpected to fall into the equation alongside the always simple, geometric building block. Hollow yet strong enough to support anyone it comes across, PolyHex is perfect for both indoor and outdoor use, for adults and kids alike. And now reaching seat height, PolyHex can be employed as a seat, an umbrella stand, a flower pot, or endlessly, in any way imagined.

About Incorporated Architecture & Design

Incorporated is a multi-disciplinary architecture and design studio with experience across a wide range of project types that specializes in the integration of the design disciplines. Having executed hotels, residential buildings, restaurants, galleries, retail stores, private residences and products, Incorporated approaches a chair, a room and a super structure all with a singular philosophy.
